

# Sustainability in our Workplace

A look at how we promote  
Sustainability and reduce  
environmental issues within  
their own environment

A Presentation by Team Sri Lanka

## We produce waste

- Electronic
- Food
- Paper
- Plastic
- Glass
- Metal

A photograph of three elephants standing in a field of trash. The elephants are in the foreground, looking towards the right. The ground is covered with a large amount of discarded waste, including plastic bottles, cardboard boxes, and other debris. The background shows a line of green trees under a bright sky.

## Where does it all go?

---

- If not checked, all waste goes to a landfill.
- There are issues that we face.
  - Disease
  - Pests
  - Air Pollution
  - Water Pollution
  - Use of Land that could have been used to benefit us and the environment in many other ways

## As an institute, we try to do our part

- To teach the future Generations of the Hospitality Industry how to play their part in all this
- To teach them alternatives to usage
- To document waste outputs and to brainstorm how we can better provide to Nature
- To guide them into having less of the unwanted and more of the care

As an Institute, We want to show them how it all can be done.

By practicing Waste Segregation

Protecting our water sources

Planting trees and living green

We care and  
it's not just  
because we  
have to

WE WANT TO.

We see the devastating effects of pollution on  
the planet.

We see it happening in our own country

We see it happening in right in our own front  
yard.

And we want to stop it.

## So what do we actually do

We start off by looking at suppliers that supply us with goods that use less to little to no plastic in their wrapping.

We look at purchasing biodegradable plastic in the form of sheets and garbage bags.

We are into decomposing food waste to return the nutrients back to the environment

We are into purchasing detergents that are eco-friendly

And we are  
looking into  
the future

We have to honestly say that we are not there yet.

We haven't reached the peak of the capabilities of Environmental Sustainability.

We are taking on this challenge and moving towards our goal.

We are looking to work with the authorities to assist us in achieving our goal.

---

When the Earth Grows,  
we Grow

When the Earth dies, we  
have killed it

Here are some of  
the images at our  
institute
